

## ABSTRACT OF THE DISCLOSURE

The present invention involves a gaming device which can display  
5 a plurality of graphical images at any one time. One or more of these  
graphical images are specified with predetermined sizes relative to a  
display frame preferably in addition to predetermined Z-levels, movements  
and other specifications. This type of gaming device provides players with  
more realistic and enhanced graphics, adding to a player's excitement and  
10 entertainment.
